Hospital Maria-Hilf provides primary healthcare as well as state-of-the-art services in a wide range of medical specializations. Operating 524 beds, the hospital offers medical care for somatic and psychiatric diseases, in addition to services offered at the rehabilitation facility. Multidisciplinary close cooperation between all members of staff ensures the provision of comprehensive medical care to all patients. Our experts work in different interdisciplinary centers, implementing the highest standards of care. Closely located to Düsseldorf International Airport, the hospital can be reached by car within 15 minutes. As a hospital owned by the Catholic Church, our activities are mainly focused on the welfare of human beings. This is why we are keen to implement a holistic approach, offering a comprehensive range of diagnostic and therapeutic services.

Center for Diabetology, Endocrinology, Nephrology and Dialysis

Diabetology, adipositas and metabolic disorders: Associate Professor Dr. Richard Wagner MD and Dr. Susanne Göbel MD offer medicinal treatment and nutritional consultation for adipositas, diagnosis and treatment of hyperlipidemia (including lipid apheresis), diagnosis and treatment of hypertension, cardiovascular risk assessment (ECG, stress ECG, echocardiography, etc.) as well as the treatment of all types of diabetes (medicinal treatment, insulin pump, follow up during pregnancy, diabetic foot).

Endocrinology: Associate Professor Dr. Richard Wagner MD offers diagnosis and treatment for all endocrine disorders (thyroid, parathyroid, hypophysis, pancreas, gonads, suprarenal). He also specializes in the diagnosis and follow-up of thyroid tumors as well as treatment of polycystic ovaries, male and female hypogonadism (menopause, impotence, erectile dysfunction), osteoporosis and metabolic disorders, implementing modern diagnostic procedures such as sonography of the thyroid gland, parathyroid, suprarenal and testicles as well as hormonal assessment.

Nephrology: Dr. Axel Rieck MD and Dr. Susanne Göbel MD are specialized in the prevention, diagnosis and treatment of primary and secondary renal diseases (diabetic nephropathy, glomerulonephritis, etc.), medical care for patients before, during and after kidney or pancreas transplantation and regulation of blood pressure.

Dialysis: Dr. Axel Rieck MD, Dr. Susanne Göbel MD and Associate Professor Richard Wagner MD offer all types of dialysis including hemodialysis, hemofiltration, hemodiafiltration, peritoneal dialysis (CAPD, CCPD, IPD) and lipid apheresis (LDL apheresis, Lpa elimination). Sonography of the abdomen, kidneys, parathyroid gland and renal blood vessels are performed for the diagnosis of different diseases.
